A gentleman who returned from a Canadian trip, Tuesday, was especially nterested in the great tides in the Bay of Fundy. The river Avon, which is an estuary of the bay, is a river for but six hours, when the tide comes in. This tide frequently forms a river of sixty-five icet in depth and the average is forty-five feet. When the river is out teams are driven into the bed beside the boats and wazons are loaded or unloaded over the ides of the boats. When the tide comes back the boats float and go out on their oyagea.

His descriptions of the Canadian cities and their people are very interacting too and are heartily enjoyed by the people who have never visited Canada.

of Governor Roosevelt.

ALBANY, July 27.—Comptroller William J. Morgan has written to Superintendent of Public Works Partridge refusing positively to pay T. J. Dwyer & Co. the sum of \$30,057115, an alleged balance said to be due on a canal contract for improving the Eric canal from the east line of Oneida county to lock 40.

Briefly, he declines to pay on the ground that David Sneil of Palatine Bridge was a member of the firm to which the contract was let and at the same time was an employee of the public works department, a violation of the constitution, also that the final price of the work exceeded the contract price by 42 per cent and that the arrangement between the contractors and the state engineer, whereby an extra allowance of \$50,000 was made, was entirely illegal.

This is the decided by the comptroller amounting to over \$550,000. The other cases will be taken un later. It is under-

SPAIN'S ARMY BILL In the Senate.

MADRID, July 27.—The discussion of soaking of the clothes in cold the army bill in the senate yesterday led to an existing scene. General Weyler, or luke-warm water—a mere arguing against any reduction of the strength of the army, warned the gov-hint at rubbing — and the ernment that the present situation made wash is done, quickly and never been so easy for the army and the people to make common cause. He himself, he said, had never thought of heading a rising, but it must be confessed that revolutions sometimes cleared the political atmosphere and accomplished

the work of regeneration.
Senor Date, minister of the interior, replying, severely censured General Wey-ler, declaring that a general who, with 300,000 men, had failed to suppress the Cuban rebellion had no right to make such threats and that any attempt at revolution, no matter by whom, would be proceeded against with the utmost rigor of the faw.

The senators warmly applauded Senor Date's speech. The army bill was adopted.

MOTORS AND HORSES.

Why the Auto-Mobile Truck Will Never Interfere with the Draft Horse Business The question of whether motor-

of the country than all other deseases but not the men most interested. They put together and until the last few years know that whatever effect the auto mobile may have on the trade in light carriage horses, the effect will be nothing on the work of the great druft animuls. An automobile may do some thing on an asphaltum pavement, but even a badly paved road becomes to it an element of uncertainty. It mus ever work on the principle of a revolv ing wheel rather than on the principle of a powerful lever scientifically applied in a muddy road or a snov bank what becomes of any vehicle that has no purchase outside of its smooth wheels? The foot of the horse plunges down into the mud and finds bottom and gets a purchase for a pull It will be a long while before we find a substitute for this particular ability is the horse. It is the thing that permits the horse to draw heavy loads up muddy bilis, over stony roads, acrosplowed fields. The horse goes where

the motorcycle cannot follow him. It was because of this that the steam plows failed to do the work that had been planned for them. It was found that the engines could not make their way over uneven and soft ground even when the wheels were specially constructed It was once believed that the steam plow would drive out the horse. but one would have to go a long ways to-day to get a sight of a steam plow. In some cases the steam plow carried

down before it to enable it to move The question of good roads is great one, but we will not see good roads everywhere in this generation. Much less will we see level roads, and it will require level roads for the motorcycle to do effective work in draw crease proportionately with the popu | 2 for 25c lation, and if all such roads were used for motorcycles the demand for horses would not be diminished in compari

son with that existing at this time The horse will continue to retain hu supremacy over all mechanical sub stitutes. If he be of good quality he will bring a good price in the future as at the present time. There is no reason why the farmer should not do his best to produce a high grade animal knowing that there are always buyels ready to pay a good price for him. Farmers' Review.
